Subject 14th Street Parklet

Meeting (if known) City Council June 28

Comments

9.3.1 14th Street Parklet

I live just around the corner from this space. As a near neighbour, I am writing to express enthusiastic support for Option 2, the creation of a Naturalized Parklet.

"Under this option, the existing vegetation would be removed, and a non-irrigated, naturalized parklet would be established. Specifically, a grouping of taller native shrubs would be planted in the centre, surrounded by a variety of native wildflowers of varying heights and blooming periods that would provide a food source for native pollinators and birds. In addition, a small hard-surfaced area with two additional picnic tables could be installed at the south end of the parklet."

As the report from City staff indicates, this approach has many advantages, including significantly lower cost to establish and maintain. If well designed, a naturalized site would not be weedy or unruly. Take a look at the new demonstration garden being developed by the City's Naturalized Parks behind the Wonderhub as an example of what is possible. It is important to normalize the presence of native plants in urban spaces because these plants are uniquely attuned to the needs of native pollinators. A naturalized parklet in this much-visited location would showcase the beauty of native species and inspire gardeners to incorporate these plants into their own spaces.

As a side note, I am excited to announce that Wild about Saskatoon is launching a new program, Pollinator Paradise YXE,

to encourage gardening with native plants citywide. Find out more here, including the reveal of our beautiful new garden signs: <https://wildaboutsaskatoon.org/pollinator-paradise-yxe/>
