March 3, 2021

Dear Ms. Hadley:

Re: Caswell Hill Lead Pipe Replacement

Today I received a letter, dated March 2, 2021, from your division and worded "Second Notice". Today's letter said I must respond to the January 13, 2021 information package I received from your division. I have already responded to your division's January 13, 2021 package in my January 15, 2021 letter. I am attaching my January 13, 2021 letter to this letter. I also had a telephone conversation with you where you told me that when a contractor is chosen by the city that the contractor would contact me and come over to determine how much interior work would be required and if there would be any damage to my interior sewers and give me a cost estimate. You also said that I am only required to replace the lead water line and not the sewers on my side of the property line. I have contacted Norseman Horizontal Directional Drilling about installing a new plastic water line completely away from the sewer line thus avoiding expensive sewer replacement on my side of the property line. Norseman can be reached at (306) 313-2054 and they said that as soon as your division chooses a contractor they could get in touch with the contractor to coordinate the work. They said that they could do the water line installation for around \$2000. This could save me at least \$1520.65 and it could be a great deal more if sewer damage occurs. Now I have been talking about my [REDACTED] 27<sup>th</sup> street house, though I also today received a second letter at my [REDACTED] 27<sup>th</sup> street house next door. The [REDACTED] 27<sup>th</sup> street house already has plastic water and sewer pipes from the street to my property line and I was told that the city had already met its responsibility to eliminate lead in the water supply to my house. After all is the city going to require me to replace all my interior copper lead solder water pipes. I have been living with this plumbing system for 45 years and suddenly there is such a panic to replace what is working quite adequately for me. Please call me regarding when a contractor can come over to discuss what work will be done and about coordinating possible water line installation by Norseman Horizontal Directional Drilling. As I said in my January 15, 2021 letter I cannot be expected to sign an open ended contract.
