## Acknowledgements

The completion of this review would not be possible without the contribution of the following organizations and individuals:

- Central Industrial businesses
- Saskatoon Police Service
- Saskatoon Light and Power
- Saskatoon Fire Department
- Saskatoon Transit
- City of Saskatoon Environmental Services
- City of Saskatoon Planning and Development
- City of Saskatoon Roadways, Fleet and Support
- City of Saskatoon Community Standards
- City of Saskatoon Transportation
- Councillor Darren Hill

### Executive Summary

The objective of the Neighbourhood Traffic Management Program is to address traffic concerns within neighbourhoods such as speeding, shortcutting, and pedestrian safety. The program was revised in August 2013 to address traffic concerns on a neighbourhood-wide basis. The program involves community and stakeholder consultation that provides residents and City staff the opportunity to work together in developing solutions that address traffic concerns within their neighbourhood. The process is outlined in the Traffic Calming Guidelines and Tools, City of Saskatoon, 2016.

A public meeting was held in August 2020 to identify traffic concerns and potential solutions within the Central Industrial Area. As a result of the meeting, a number of traffic assessments were completed to confirm and quantify the concerns raised by the road users in the industrial area. Based on the road users' input and the completed traffic assessments, a Traffic Plan was developed and presented to the community through video presentation posted to the project Engage page in May 2021.

A summary of recommended improvements for the Central Industrial Area is included in Table ES-1. The summary identifies the locations, recommended improvements, and justification. The schedule to implement the Traffic Plan can vary depending on the complexity of the proposed improvement. According to the Traffic Calming Guidelines and Tools document, the time frame may range from short-term (1 to 2 years); medium-term (3 to 5 years) and long-term (5 years plus). Accordingly, the goals for implementing the improvements ranges from 1 to 5 years.

The Central Industrial Traffic Plan is illustrated in Exhibit ES-1.

## Central Industrial Area Traffic Review

Table ES-1: Central Industrial Area Recommended Improvements

Item	Location	Recommended Improvement	Justification
1	1 <sup>st</sup> Avenue & 26 <sup>th</sup> Street	Active Pedestrian Corridor (south side)*	Improve pedestrian safety
2	3 <sup>rd</sup> Avenue & Duke Street	Active Pedestrian Corridor (north side)*	Improve pedestrian safety
3	2 <sup>nd</sup> Avenue & Princess Street	Remove existing crosswalk	No longer warranted with upgrades to the adjacent crossings
4	2 <sup>nd</sup> Avenue & King Street	Pedestrian Activated Signal (south side)*	Improve pedestrian safety
5	Neighbourhood-wide	Sidewalk and ramps to be installed as per the Sidewalk Infill Program	Improve pedestrian safety

\*These recommendations may require modification at the time of detailed design due to the complexity of these locations.

APPENDIX D: Pedestrian Device Assessments	
APPENDIX E: Collision Analysis	
APPENDIX F: Public Presentation – June 1, 2021	
APPENDIX G: Decision Matrix	
APPENDIX H: Additional Concerns Received After Presentation of Draft Plan	
APPENDIX I: Resident and Stakeholder Comments	

### 1. Introduction

As the City of Saskatoon continues to grow, many neighbourhoods face issues such as pedestrian safety, cut-through traffic, and increased speeds. In August 2013, City Council adopted the City of Saskatoon Traffic Guidelines and Tools that outlines a procedure for completing traffic reviews on a neighbourhood-wide basis. In 2016, the successful Neighbourhood Traffic Review program was expanded to include industrial areas. Prior to this, neighbourhood traffic issues were dealt with on a case-by-case basis with mixed results. Since 2013, the formal process has proven to be very successful in providing recommendations that improve neighbourhood traffic conditions and pedestrian safety. Recommendations are developed by the Administration and residents in a collaborative manner. Accordingly, this report provides the Traffic Plan for the Central Industrial Area.

The Central Industrial Area is bound by 25<sup>th</sup> Street to the south, 2<sup>nd</sup> Avenue to the east, Idylwyld Drive to the west and 33<sup>rd</sup> Street to the north. The land use is primarily industrial.

The neighbourhood traffic review includes four stages:

- **Stage 1** – Identify issues, concerns and possible solutions through the initial neighbourhood consultation and the Saskatoon Engage online discussion.
- **Stage 2** – Develop a draft traffic plan based on stakeholders' input and traffic assessments.
- **Stage 3** – Present the draft traffic plan to the neighbourhood at a follow-up meeting; circulate the plan to other civic departments for feedback; make adjustments as needed; and present the plan to Standing Policy Committee on Transportation.
- **Stage 4** – Implement the proposed measures in specific time frame, short-term (1 to 2 years), medium-term (3 to 5 years) or long-term (5 years plus).

This report presents the study findings and recommendations.

## 2. Identify Issues, Concerns and Possible Solutions

A public meeting was held in August 2020 to identify traffic concerns within the Central Industrial Area. At the meeting, business owners, employees, and road users were given the opportunity to express their concerns and suggest possible solutions. The meeting minutes and presentation are provided in **Appendix A**.

The following pages summarize the concerns and suggested solutions identified during the initial consultation with the stakeholders including all correspondence, and Saskatoon Engage discussion comments received prior to the follow-up meeting.

### 2.1. Pedestrian Safety

It is important to address pedestrian safety concerns to support active transportation. Walking to nearby amenities reduces traffic volumes.

Pedestrian crosswalks need to adhere to the City of Saskatoon Council Policy C07-018 Traffic Control at Pedestrian Crossings, which states the installation of appropriate traffic controls at pedestrian crossings shall be based on the process outlined in the latest edition of the Transportation Association of Canada's Pedestrian Crossing Control Guide.

Neighbourhood concerns regarding pedestrian safety were raised at the following locations:

- 1<sup>st</sup> Avenue and 26<sup>th</sup> Street;
- 2<sup>nd</sup> Avenue and King Street;
- 3<sup>rd</sup> Avenue and Duke Street; and
- 3<sup>rd</sup> Avenue and Duchess Street.

The stakeholders suggested the following solutions:

- Upgraded pedestrian crossing devices; and
- Additional street lighting.

### 2.2. Parking

Parking is allowed on all city streets unless signage is posted. According to City of Saskatoon Bylaw 7200, The Traffic Bylaw, vehicles are restricted from parking within 10 metres of an intersection and one metre of a driveway or back lane.

Neighbourhood concerns regarding parking were identified for the 700 block of 1<sup>st</sup> Avenue.

A possible solution identified by residents was to decrease the time restricted parking limit from 3 hours to 2 hours.

### 3. Develop Draft Traffic Plan

#### 3.1. Methodology

Stage 2 of the traffic review included development of a draft traffic plan. This was completed through the following actions:

- Create a detailed list of all the issues provided by the businesses, employees, and road users.
- Collect historical traffic studies and information the City has on file for the area.
- Prepare a data collection program that will provide the appropriate information needed to undertake the assessments.
- Complete the data collection, which may include:
  - Daily and weekly traffic counts;
  - Speed measurements;
  - Intersection turning movement counts;
  - Pedestrian counts;
  - Site observations; and
  - Collision analysis.
- Assess the issues by using the information in reference with City policies, bylaws, and guidelines, transportation engineering design guidelines and technical documents, and professional engineering judgment.

The following sections provide details on the data collected for pedestrian crossing assessments and collision analysis. A map of the traffic data collection is shown in **Appendix B**.

#### 3.2. Traffic Signal Assessments

Assessments are conducted to determine the need for traffic signals in adherence to the Traffic Signal and Pedestrian Signal Head Warrant Handbook. A warrant system assigns points for a variety of conditions including:

- number of traffic lanes;
- posted speed limit of the street;
- distance to the nearest traffic signal; and
- number of pedestrians and vehicles at the location.

Pedestrian and traffic data is collected during the five peak hours of: 8:00 a.m. to 9:00 a.m., 11:30 a.m. to 1:30 p.m., and 4:00 p.m. to 6:00 p.m.

If a traffic signal is not warranted, additional measures to improve safety (i.e. parking restrictions, oversized stop signs) may be considered.

## Central Industrial Area Traffic Review

A summary of the traffic signal assessments is provided in Table 3-1.

Table 3-1: Traffic Signal Assessments

Location	Traffic Signal Warrant Points	Results
1 <sup>st</sup> Avenue and 26 <sup>th</sup> Street	7	Not warranted
3 <sup>rd</sup> Avenue and Duke Street	20	Not warranted
2 <sup>nd</sup> Avenue and King Street	27	Not warranted

Details of the traffic signal assessments are provided in **Appendix C**.

### 3.3. Pedestrian Assessments

Pedestrian assessments were conducted to determine the need for pedestrian actuated signalized crosswalks in adherence to the City of Saskatoon Council Policy C07-018 Traffic Control at Pedestrian Crossings.

Pedestrian crossing devices include:

- standard crosswalk;
- zebra crosswalk;
- rectangular rapid flashing beacon (ground mounted flashing lights);
- actuated pedestrian corridor (overhead flashing yellow lights); and
- pedestrian actuated signals.

The policy provides a decision matrix for locating pedestrian devices considering a number of elements:

- traffic signal warrants;
- pedestrian and traffic volumes;
- distance to nearest traffic control device;
- pedestrian desire line; and
- network connectivity.

Once a location has been identified as a necessary pedestrian connection, the type of pedestrian device is selected using a treatment matrix that considers traffic volume, posted speed limit and number of lanes for pedestrian crossing.

A summary of the pedestrian studies is provided in Table 3-2 and details are provided in **Appendix D**.

## Central Industrial Area Traffic Review

Table 3-2: Pedestrian Assessments

Location	Pedestrian Desire Confirmation	Results
1 <sup>st</sup> Avenue and 26 <sup>th</sup> Street	Yes	Provides connection to commercial businesses, EGADZ, and curling rink. Active Pedestrian Corridor recommended.
3 <sup>rd</sup> Avenue and Duke Street	Yes	Provides connection across 2 <sup>nd</sup> Avenue between employment area and residential area. Active Pedestrian Corridor recommended.
2 <sup>nd</sup> Avenue and King Street	Yes	Provides connection across 2 <sup>nd</sup> Avenue between employment area and residential area. Pedestrian Actuated Signal recommended.

The 2<sup>nd</sup> Avenue/3<sup>rd</sup> Avenue corridor was assessed for pedestrian crossing improvements between Queen Street and Duke Street. Based on the length of the corridor, two pedestrian crossings are warranted. Upgraded crossings have been recommended at 3<sup>rd</sup> Avenue and Duke Street and at 2<sup>nd</sup> Avenue and King Street. Since the crossing at 2<sup>nd</sup> Avenue and Princess Street had the lowest pedestrian volumes, the existing zebra crosswalk is recommended for removal.

### 3.4. Collision Analysis

The most recently available five-year collision data (2015 to 2019) was provided by Saskatchewan Government Insurance (SGI). High-collision locations, typically noted as the locations with an average of two or more collisions per year, were reviewed in more depth to identify trends and possible improvements. Signalized intersections were not included in the collision analysis as they have higher traffic volumes resulting in higher collision trends. These intersections are studied as part of the major intersection reviews. Intersections with two or more collisions per year within the Central Industrial Area include:

- 3<sup>rd</sup> Avenue and Duke Street
- 2<sup>nd</sup> Avenue and 26<sup>th</sup> Street
- 3<sup>rd</sup> Avenue and Duchess Street
- 2<sup>nd</sup> Avenue and Princess Street

Details of the collision analysis are provided **Appendix E**.

## 4. Present Traffic Plan

### 4.1. Methodology

Stage 3 of the neighbourhood traffic review included finalizing the traffic plan. This was achieved by completing the following steps:

- Based on the assessments, prepare a draft plan that illustrates the appropriate recommended improvements.
- Present the draft plan to the businesses, employees and road users.
- Circulate the draft plan to the civic departments for comment.
- Revise the draft plan based on feedback from the stakeholders.
- Prepare a technical document summarizing the recommended plan and project process.

The tables in the following sections provide the details of the recommended traffic plan, including the location, recommended improvement and justification of the recommended improvement.

### 4.2. Pedestrian Safety

The recommended improvements to increase pedestrian safety are detailed in Table 4-1.

Table 4-1: Recommended Improvements – Pedestrian Safety

Location	Recommended Improvement	Justification
1 <sup>st</sup> Avenue and 26 <sup>th</sup> Street	Active Pedestrian Corridor (south side)	Improve pedestrian safety
3 <sup>rd</sup> Avenue and Duke Street	Active Pedestrian Corridor (north side)	Improve pedestrian safety
2 <sup>nd</sup> Avenue and Princess Street	Remove existing zebra crosswalk	No longer warranted with recommended upgrades to the adjacent crossings
2 <sup>nd</sup> Avenue and King Street	Pedestrian Actuated Signal	Improve pedestrian safety
Neighbourhood-wide	Sidewalk and ramps to be installed as per the Sidewalk Infill Program	Improve pedestrian safety

### 4.3. Follow-up Consultation – Presentation of Traffic Plan

The recommended improvements were presented to stakeholders in a video presentation that was posted to the project Engage page in May 2021. The presentation and draft traffic plan are provided in **Appendix F**.

A decision matrix detailing the list of recommended improvements presented at the follow-up meeting are included in **Appendix G**. Additional issues raised during and after the follow-up meeting were assessed and outlined **Appendix H**. Recommendations were added to the list of improvements if necessary. The revised list of recommendations received general support from Saskatoon Police Service, Saskatoon Light and Power, Saskatoon Fire Department, Environmental Services, Parking Services, Roadways, Fleet and Support Services, and Transit.

### 4.4. Engagement Summary

Businesses, employees, and road users were invited to participate in the process through a public meeting and virtual presentation, as outlined in Table 4-2.

Table 4-2: Public Meetings Summary

Meeting Details	Meeting Purpose	Meeting Materials
<b>Meeting #1</b> August 19, 2020 Online Teams Meeting 3 attendees	To identify specific traffic concerns and potential improvements	Meeting minutes and presentation included in <b>Appendix A</b>
<b>Virtual Presentation</b> June 1, 2021	To present the draft traffic plan	Presentation and draft traffic plan included in <b>Appendix F</b>

Stakeholders in the Central Industrial Area were notified of the meetings via:

- a flyer delivered to each business in the area;
- City of Saskatoon events calendar, [saskatoon.ca/engage](http://saskatoon.ca/engage), and [saskatoon.ca/NTR](http://saskatoon.ca/NTR);
- billboards placed on 25<sup>th</sup> Street near 1<sup>st</sup> Avenue prior to the first meeting; and
- notifying the appropriate City Councillor.

The Engage page was used to disseminate information about the meetings, as well as status updates and notifications for the project. It also provided a forum for stakeholder comments.

## Central Industrial Area Traffic Review

---

Stakeholders were invited to provide their concerns and feedback through the following:

- [saskatoon.ca/engage](https://saskatoon.ca/engage) webpage;
- report a traffic issues application;
- written submissions at the meetings;
- written notes taken by the Administration at the meetings; and
- written, verbal, and e-mail submission to the Administration.

Business owners, employees, or road users who could not attend the meetings were able to view the meeting materials and provide feedback via the City's [saskatoon.ca/engage](https://saskatoon.ca/engage) website, or by phone, email, or mail. Feedback received throughout the process is included in

**Appendix I.**

## 5. Implementation

Stage 4, the final stage of the traffic review, is to install the recommended improvements. The time frame depends upon the complexity and cost of the solution. A short-term time frame is defined by implementing the improvements within 1 to 2 years; medium-term is 3 to 5 years; and long-term is 5 years plus.

The estimated costs of the improvements included in the Traffic Plan are outlined in the following tables:

- Table 5-1: Signs and Pavement Markings Cost Estimate
- Table 5-2: Pedestrian Safety Devices Cost Estimate
- Table 5-3: Total Cost Estimate

Table 5-1: Signs and Pavement Markings Cost Estimate

Location	Device	Cost Estimate	Implementation Goal
2 <sup>nd</sup> Avenue and Princess Street	Remove existing zebra crosswalk	\$200	Coordinated with installation of enhanced pedestrian crossings nearby
<b>Total</b>		<b>\$200</b>	

Table 5-2: Pedestrian Safety Devices Cost Estimate

Location	Device	Cost Estimate	Implementation Goal
1 <sup>st</sup> Avenue and 26 <sup>th</sup> Street	Active Pedestrian Corridor (south side)	\$50,000	5+ years
3 <sup>rd</sup> Avenue and Duke Street	Active Pedestrian Corridor (north side)	\$45,000	
2 <sup>nd</sup> Avenue and King Street	Pedestrian Actuated Signal	\$150,000	
<b>Total</b>		<b>\$245,000</b>	

## Central Industrial Area Traffic Review

Table 5-3: Total Cost Estimate

Category	Implementation Goal		
	Short-Term (1-2 years)	Medium-Term (3 to 5 years)	Long-Term (5 years plus)
Signs and Pavement Markings	-	-	\$200
Pedestrian Safety Devices	-	-	\$245,000
<b>Total</b>	-	-	<b>\$245,200</b>

The total cost estimate for pedestrian safety devices is \$245,200. The cost estimate for pedestrian ramps and sidewalks/multi-use paths will be determined at a later date once a feasibility analysis has been completed.

The list of recommended improvements resulting from the traffic review including the location and justification is summarized in Table 5-4.

The resulting recommended Central Industrial Neighbourhood Traffic Plan is illustrated in Exhibit 5-1.

Table 5-4: Central Industrial Recommended Improvements

Item	Location	Recommended Improvement	Justification
1	1 <sup>st</sup> Avenue & 26 <sup>th</sup> Street	Active Pedestrian Corridor (south side)*	Improve pedestrian safety
2	3 <sup>rd</sup> Avenue & Duke Street	Active Pedestrian Corridor (north side)*	Improve pedestrian safety
3	2 <sup>nd</sup> Avenue & Princess Street	Remove existing crosswalk	No longer warranted with upgrades to the adjacent crossings
4	2 <sup>nd</sup> Avenue & King Street	Pedestrian Activated Signal (south side)*	Improve pedestrian safety
5	Neighbourhood-wide	Sidewalk and ramps to be installed as per the Sidewalk Infill Program	Improve pedestrian safety

\*These recommendations may require modification at the time of detailed design due to the complexity of the installation at these locations and possible utility conflicts.

Public Meeting #1 – August 19, 2021

# CITY OF SASKATOON

## Central Industrial Neighbourhood Traffic Review Minutes

**Date:** Wednesday, August 19, 2020

**Time:** 7:00 – 9:00 pm

**Location:** Microsoft Teams Online Meeting

### Attendees:

Name	Position
Chelsea Lanning	City of Saskatoon Transportation Engineer Evergreen Neighbourhood Traffic Review Project Manager
Nathalie Baudais	City of Saskatoon Senior Transportation Engineer
Katie Sapieha	City of Saskatoon Transportation Engineer

### Items:

#### Welcome and Introductions

#### Presentation from the Transportation Division

(Presented by Chelsea Lanning – Transportation Engineer)

See Video – Online meeting video recording – August 19, 2020

#### Question and Answer Session

- Question:** I would like to address the parking times on the section of 1<sup>st</sup> Avenue by the 700 block. It is 3 hours there but a block away it is only a 2 hour time restriction. Can we get a 2 hour restriction for the 700 block as well?

**Chelsea:** That is something that we could look at through this review. Our parking services group contributes to making the decision on parking time restrictions. We would have to consult with them about changing the time restriction.

**Nathalie:** All of our parking restrictions and prohibitions need to align with our Council Policy related to that and we need quite a bit of information about supply and demand and adjacent land use before we can make those recommendations.

**Comment:** With the 3 hour parking allowed, there are many workers that work in other businesses and park along the street and restrict commercial sales.

**Nathalie:** We often hear these kinds of concerns in business areas; that staff park and take up all of the customer parking stalls. This is definitely something we can take a look at.

### **Updates on other relevant projects**

#### Rectangular Rapid Flashing Beacon installation at 25<sup>th</sup> Street and Pacific Avenue:

A rectangular rapid flashing beacon (RRFB) was installed at the intersection of 25<sup>th</sup> Street and Pacific Avenue near the police station recently. This device is used by pressing a button and lights flash on the sides of the street. We heard about this location from your neighbours and those who use this crossing. It was installed in May.

### **Next Steps**

1. Continue monitoring traffic issues in your neighbourhood
2. Mail-in or email comments no later than September 22, 2020
3. Additional public input via Engage Page no later than September 22, 2020
4. Traffic counts data collection and analysis. Due to COVID-19 we may have to wait to complete traffic counts. We are hoping to begin counting by fall.
5. Develop recommendations and prepare draft traffic plan
6. Follow-up public meeting to provide input on draft plan
7. Determine revisions and finalize traffic plan
8. Present traffic plan to City Standing Policy Committee on Transportation

### **Adjournment**

The screenshot shows the City of Saskatoon website's 'Neighbourhood Traffic Reviews' page. The header includes the City of Saskatoon logo and navigation links for 'Create Account', 'Sign in', 'Accessibility', 'Engage', 'Contact Us', and 'Search'. A secondary navigation bar lists various services: 'Services for Residents', 'Moving Around', 'Parks, Recreation & Attractions', 'Community, Culture & Heritage', 'Business & Development', 'New to Saskatoon', and 'City Hall'. The breadcrumb trail reads: 'Home > Moving Around > Driving & Roadways > Managing Traffic > Traffic Studies > Neighbourhood Traffic Reviews'. On the left, a sidebar menu lists categories like 'Accessibility', 'Transit', 'Cycling', 'Driving & Roadways', 'Managing Traffic', 'Traffic Studies', and 'Neighbourhood Traffic Reviews'. The main content area is titled 'Neighbourhood Traffic Reviews' and includes a 'Subscribe to Traffic Review Notifications' button. The text explains that a typical review begins with a community meeting, followed by assessments and recommendations presented to residents at a secondary meeting. It notes that approved plans are implemented and lists measures such as signage, temporary traffic calming, and permanent measures. Online discussions are posted on 'Shaping Saskatoon' for one month after meetings. Residents can also report concerns by calling 306-975-2454 or completing a community traffic issue report. At the bottom, there is a dropdown menu for '2018 Neighbourhood Traffic Review'.

## Pedestrian Device Assessments

## 1<sup>st</sup> Avenue and 26<sup>th</sup> Street

Preliminary Assessment Decision Point		Pedestrian Crossing
Traffic Signal Warrant	Points	7
	Warranted (Y/N)	No
Average Hourly Pedestrian Volume $\geq$ 15 EAU's AND vehicular volume $\geq$ 1,500 veh/day?	Average Hourly Pedestrian Volume	EAU > 15
	Vehicular Volume	6,500 vehicles/day
	Answer (Y/N)	Yes
Is this site > 200 metres from the nearest traffic control device?	Distance from the nearest traffic control device	185 m
	Answer (Y/N)	No
Is average hourly latent pedestrian crossing demand $\geq$ 15 EAUs OR is there requirement for system connectivity?	Latent pedestrian crossing demand	Similar to existing demand
	Required connection?	Provides connection to businesses, EGadz and curling rink
	Answer (Y/N)	Yes
Treatment Selection	Table-1 in Pedestrian Crossing Guide	<p style="text-align: center;">4,500 &lt; ADT &lt; 9,000 Standard crosswalk appropriate with installation of curb extensions OR Rectangular Rapid Flashing Beacon</p> <p style="text-align: center;">Recommended to upgrade to an Active Pedestrian Corridor to improve visibility of the crossing due to the truck traffic in the area and angle parking near the crossing.</p>

---

<sup>1</sup> EAU – Equivalent Adult Units to account for pedestrian age and physical ability. Adults – 1.0 EAU; Children  $\leq$  12 years – 2.0 EAUs; Older pedestrians  $\geq$  65 years – 1.5 EAUs; Pedestrian with impairment – 2.0 EAUs.

## 2<sup>nd</sup> Avenue and King Street

Preliminary Assessment Decision Point		Pedestrian Crossing
Traffic Signal Warrant	Points	27
	Warranted (Y/N)	No
Average Hourly Pedestrian Volume ≥ 15 EAU's AND vehicular volume ≥ 1,500 veh/day?	Average Hourly Pedestrian Volume	EAU < 15
	Vehicular Volume	17,700 vehicles/day
	Answer (Y/N)	No
Is this site > 200 metres from the nearest traffic control device?	Distance from the nearest traffic control device	150 m
	Answer (Y/N)	No
Is average hourly latent pedestrian crossing demand ≥ 15 EAUs OR is there requirement for system connectivity?	Latent pedestrian crossing demand	May be higher demand than existing if the crossing was improved
	Required connection?	Provides connection across 2 <sup>nd</sup> Avenue between employment area and residential area. Additional connection between Queen Street and Duke Street would be beneficial. King Street had higher demand than Princess Street.
	Answer (Y/N)	Yes
Treatment Selection	Table-1 in Pedestrian Crossing Guide	Pedestrian actuated signal recommended

---

<sup>1</sup> EAU – Equivalent Adult Units to account for pedestrian age and physical ability. Adults – 1.0 EAU; Children ≤ 12 years – 2.0 EAUs; Older pedestrians ≥ 65 years – 1.5 EAUs; Pedestrian with impairment – 2.0 EAUs.

# Neighbourhood Traffic Review Schedule

# What We Heard

- Pedestrian Crossing Concerns at:
  - 1<sup>st</sup> Avenue & 26<sup>th</sup> Street
  - 2<sup>nd</sup> Avenue & King Street
  - 3<sup>rd</sup> Avenue & Duke Street
  - 3<sup>rd</sup> Avenue & Duchess Street
- Other Concerns
  - Time restricted parking on the 700 block of 1<sup>st</sup> Avenue

# What We Did

- Field observations
- Data collection
  - 4 intersection counts, including pedestrian counts
- Collision Analysis

# What We Propose

- Active pedestrian corridor
- Pedestrian activated signal
- Sidewalks

# Recommendation #1

## 1<sup>st</sup> Avenue & 26<sup>th</sup> Street

- Active Pedestrian Corridor
  - The installation of this recommendation may change at the time of detailed design due to the complexity of this location

# Recommendation #2, 3, & 4

## #2: 3<sup>rd</sup> Avenue & Duke Street

- Active Pedestrian Corridor

## #3: 2<sup>nd</sup> Avenue & Princess Street

- Remove existing crosswalks

## #4: 2<sup>nd</sup> Avenue & King Street

- Pedestrian Activated Signal

- The installation of recommendations 2 and 4 may change at the time of detailed design due to the complexity of this location

# Recommendation #2

## 3<sup>rd</sup> Avenue & Duke Street

- Active Pedestrian Corridor
  - The installation of recommendation 2 may change at the time of detailed design due to the complexity of this location

Example: Active Pedestrian Corridor

# Recommendation #3

## 2<sup>nd</sup> Avenue & Princess Street

- Remove existing crosswalks

# Recommendation #4

## 2<sup>nd</sup> Avenue & King Street

- Pedestrian Activated Signal
  - The installation of recommendation 4 may change at the time of detailed design due to the complexity of this location

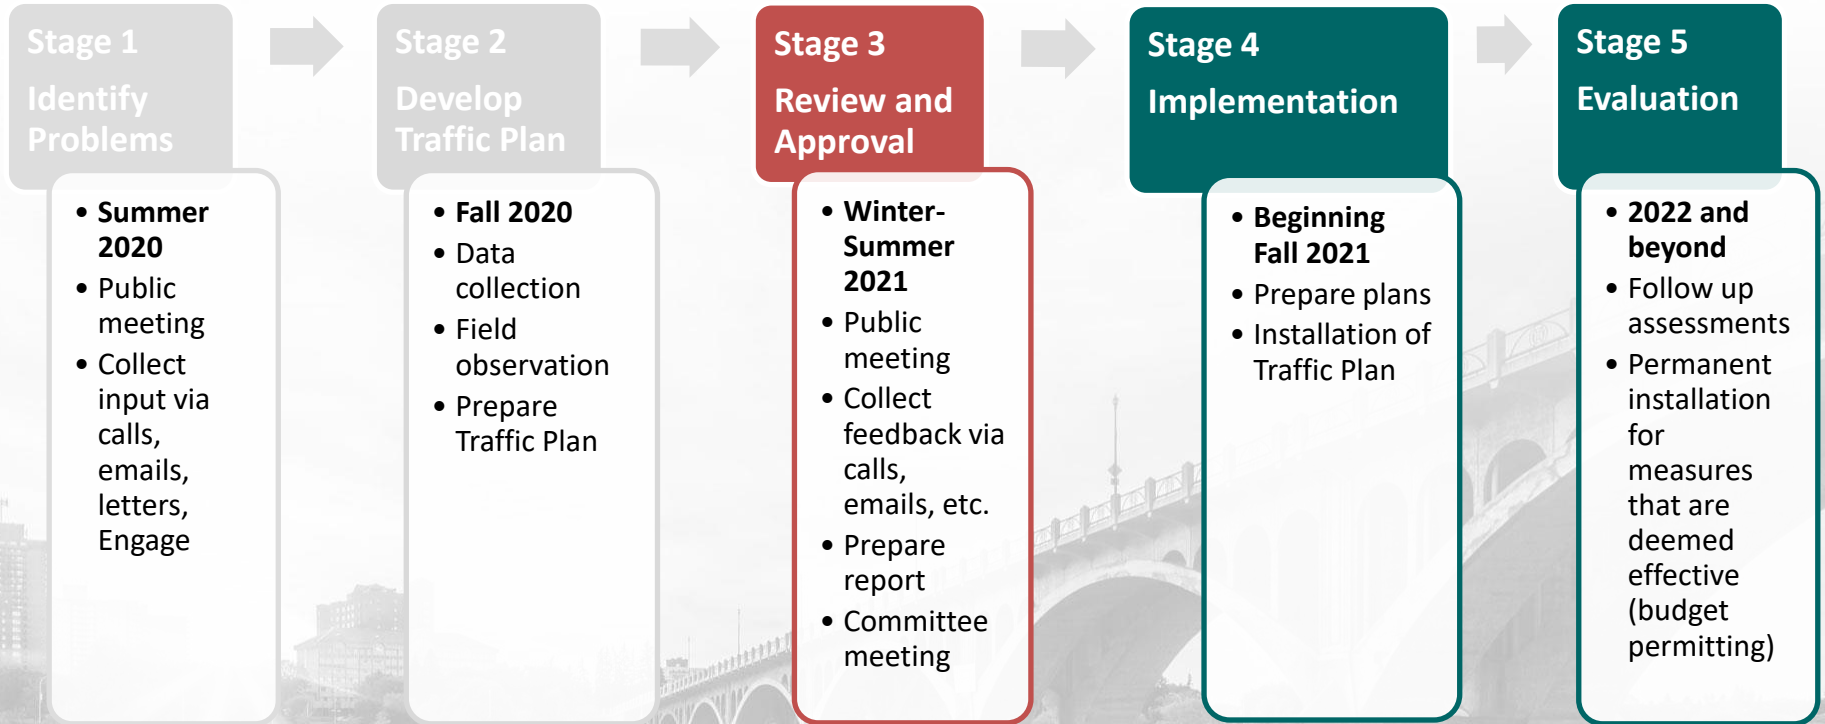

# Recommendation #5

## Neighbourhood-wide

- Sidewalk and pedestrian ramps to be installed as per the Sidewalk Infill Program, pending feasibility review

# Next Steps

\*Schedule is pandemic dependent

Attn: Chelsea Lanning, City of Saskatoon  
222 3rd Avenue North  
Saskatoon, SK S7K 0J5

The image shows two screenshots of the City of Saskatoon website. The top screenshot displays the 'Central Industrial' page, which is part of the Neighbourhood Traffic Review Process. It features a header with the City of Saskatoon logo and navigation links like 'Create Account', 'Sign In', 'Accessibility', 'Engage', 'Contact Us', and 'Search'. Below the header, there are tabs for 'Services for Residents', 'Moving Around', 'Parks, Recreation & Attractions', 'Community, Culture & Heritage', 'Business & Development', 'Environmental Initiatives', and 'City Hall'. The main content area shows a large image of a street with trees and a stop sign, with the text 'Central Industrial' and a description of the review process. A blue banner at the bottom of the image says 'For the latest updates on the City's response to COVID-19 - visit saskatoon.ca/covid19'. Below the image, there are tabs for 'Engage', 'Background', and 'Process', and a 'Contact Us' button.

The bottom screenshot shows the 'Neighbourhood Traffic Reviews' page. It has a similar header and navigation structure. The main content area is titled 'Neighbourhood Traffic Reviews' and includes a 'Subscribe to Traffic Review Notifications' button. The text describes the review process, from community meetings to Council approval. A sidebar on the left lists various categories: Accessibility, Transit, Cycling, Driving & Roadways, Winter Road Maintenance, Road Maintenance & Repair, Managing Traffic, Pavement Markings, Traffic Noise, Intersections, Merging Guidelines, Traffic Studies, and Neighbourhood Traffic Reviews. The 'Neighbourhood Traffic Reviews' category is currently selected and highlighted in green. Below the main text, there are links for 'Online discussions are posted at Shaping Saskatoon' and 'Residents can also report neighbourhood traffic concerns by calling Transportation Customer Service at 306-975-2454 or by completing a Community Traffic Issue report.'

## Central Industrial Neighbourhood Traffic Plan Recommended Improvements

Item	Location	Recommended Improvement	Justification
1	1 <sup>st</sup> Avenue & 26 <sup>th</sup> Street	Active Pedestrian Corridor (south side)*	Improve pedestrian safety
2	3 <sup>rd</sup> Avenue & Duke Street	Active Pedestrian Corridor (north side)*	Improve pedestrian safety
3	2 <sup>nd</sup> Avenue & Princess Street	Remove existing crosswalk	No longer warranted with upgrade of adjacent crossings
4	2 <sup>nd</sup> Avenue & King Street	Pedestrian Activated Signal (south side)*	Improve pedestrian safety
5	Neighbourhood-wide	Sidewalk and ramps to be installed as per the Sidewalk Infill Program	Improve pedestrian safety

\*These recommendations may require modification at the time of detailed design due to the complexity of these locations.

# Appendix G

## Decision Matrix

Item	Location	Recommendation	Reason	Comments	Decision
1	1 <sup>st</sup> Avenue & 26 <sup>th</sup> Street	Active Pedestrian Corridor (south side)*	Improve pedestrian safety	None	Carried
2	3 <sup>rd</sup> Avenue & Duke Street	Active Pedestrian Corridor (north side)*	Improve pedestrian safety	None	Carried
3	2 <sup>nd</sup> Avenue & Princess Street	Remove existing crosswalk	No longer warranted with upgrade of adjacent crossings	None	Carried
4	2 <sup>nd</sup> Avenue & King Street	Pedestrian Traffic Signal (south side)*	Improve pedestrian safety	None	Carried

\*These recommendations may require modification at the time of detailed design due to the complexity of these locations.

## **Appendix H**

### Additional Concerns Received After Presentation of Draft Plan

Location	Comments	Decision
3 <sup>rd</sup> Avenue & Duchess Street	Pedestrian crossing improvements are desired because students are crossing at this intersection.	The intersection of 3 <sup>rd</sup> Avenue and Duchess Street is approximately 100 m from the intersection of 3 <sup>rd</sup> Avenue and 33 <sup>rd</sup> Street which is too close in proximity to be eligible for a pedestrian crossing device according to Council Policy C07-018 – Traffic Control at Pedestrian Crossings
	Vehicles turning right from 33 <sup>rd</sup> Street eastbound to 3 <sup>rd</sup> Avenue southbound drift out of the curb lane when making that movement; request for a barrier between the curb lane and centre lane heading southbound.	This intersection is being reviewed for an intersection improvement and the concern will be considered by that project since it is outside the scope of the NTR.
2 <sup>nd</sup> Avenue	We regularly hear trucks and Harley Davidsons roaring down 2 <sup>nd</sup> Avenue with either no mufflers or very loud ones. We can clearly hear them with our windows closed over a block away. They are obviously way louder than the bylaw allows and I wonder why the City does nothing or almost nothing to enforce this. There are many studies that confirm this noise to be a health threat to people living in these corridors. Also leaf blowers that are gas powered. Many cities are now banning them. I think we should look at that within so many meters of a residential property. They are not only offensive in their noise, they are also dangerous to the health of the operators.	The Administration has retained a consultant to research, review, provide a cost estimate, and ultimately recommend possible mitigation measures for vehicle noise that complements the existing Traffic Noise Sound Attenuation policy, and may address issues for streets that are not eligible for Traffic Noise Sound Attenuation measures.

**Subject:** RE: CITIZEN INQUIRY, [REDACTED], [REDACTED] re: Crossing 2nd Ave @ King St [REDACTED]

Hi [REDACTED],

Council approved an update to the Policy C07-018 *Traffic Control – Pedestrian Crossing* on September 25, 2018. The policy provides a decision matrix for locating pedestrian devices considering a number of elements:

- Traffic signal warrants;
- pedestrian and traffic volumes;
- distance to nearest traffic control device;
- pedestrian desire line; and
- network connectivity.

Once a location has been identified as a necessary pedestrian connection, the type of pedestrian device is selected using a treatment matrix which considers traffic volume, posted speed limit and number of lanes for pedestrian crossing.

The following intersections have not yet been reviewed under the new policy:

- 2<sup>nd</sup> Avenue & King Street,
- 2<sup>nd</sup> Avenue & Princess Street, and
- 2<sup>nd</sup> Avenue & Duke Street.

The pedestrian crossings for these three intersections will be reviewed through Neighbourhood Traffic Review for the Central Business District – Central Industrial area, planned for 2020.

Thanks,  
Nathalie

Hello [REDACTED],

Thank you for the email. I know that there is something planned for some intersections in that corridor, but I don't know exactly which ones.

If you can provide me with your address and a contact phone number, then I can forward your enquiry to the administration for a response.

Thank you,  
[REDACTED]

Hello [REDACTED]

I've lived in City Park [REDACTED]. I've recently had the opportunity with a new job, to walk to work. Unfortunately this requires crossing 2nd Ave at King Street. I'm not sure if you've ever attempted this, but I don't recommend it. A colleague of mine also crosses the road here and told me it wasn't safe, but I didn't think it was as bad as she said. It is. I have only walked this path for 3 weeks, but on 4 occasions have been in the middle of the crosswalk where a car has ripped past me oblivious to the fact I was walking in a crosswalk, on 3 occasions have had cars stop for me where a car pulls around the stopped cars and rips past me in the crosswalk, and more often than not, have nobody stop for me at all.

I used to walk across to the university, and had the benefit of proper cross walk indicators at Nutrien children's park. Here the crosswalk is clearly marked on the road and above the crosswalk, has overhead lighting, and a button to hit to get flashing lights. **In this crosswalk I felt safe.**

For many months of the year in Saskatoon, my walk to and from work is in the dark. Reality of a northern city.

I would like to know if this crosswalk is on anybody's safety radar at the City of Saskatoon. If not, I would like you to consider the safety of this crosswalk and propose options to make it safe for the walkers in Saskatoon.

Thank you for your time and consideration of this request.

**Subject:** 1st Ave N and 26th St E crosswalk requested

Good morning, Nathalie,

[REDACTED] just called, and she would like to see a button crosswalk with lighting installed to assist pedestrians in crossing 1<sup>st</sup> Ave N at 26<sup>th</sup> St E. She says there's only a sign with a man walking on it, which is ignored by most drivers. A lot of people use this intersection, and she feels it's very dangerous the way it is.

[REDACTED]

Thank you,

[REDACTED]

Hi Guys,  
Can you please respond  with the following? Thanks!

Hello [REDACTED],

Thank you for raising your concerns regarding pedestrian safety in the City. Here is our response to the locations that you had concerns with:

- 1) Idylwyld Drive & Auditorium Avenue
  - The signal at Idylwyld Drive and Auditorium Avenue is coordinated with the one at 22nd Street. For this reason, the East-West walk waiting times fluctuate.
  - The City is currently revisiting its coordination policy with the goal of the improving pedestrian wait times.
  - We have a plan for the redesign of Idylwyld Drive that will make this street more hospitable to pedestrians and cyclists alike.
- 2) 3<sup>rd</sup> Avenue & Duchess Street
  - The 3<sup>rd</sup> Avenue & Duchess Street intersection is too close in proximity to the 3<sup>rd</sup> Avenue & 33<sup>rd</sup> Street intersection to be eligible for a pedestrian crossing device according to Council Policy C07-018 – Traffic Control at Pedestrian Crossings.
  - We will be reviewing the 2<sup>nd</sup> Avenue / 3<sup>rd</sup> Avenue corridor (between Queen and Duke) for pedestrian crossing devices as part of the Central Industrial Neighbourhood Traffic Review next year. Only one location will be eligible for a device so we need to identify the most appropriate crossing location to service the entire corridor.
- 3) 8<sup>th</sup> Street between Broadway Avenue and Cumberland Avenue
  - 8<sup>th</sup> Street is one of the Bus Rapid Transit corridors. Once the BRT transit station locations are finalized, we can proceed with identifying the appropriate locations for additional pedestrian corridors across 8<sup>th</sup> Street. We want to ensure that pedestrian corridors will connect to the rapid transit stations to provide

a cohesive city wide transportation network. This will ensure that we are fiscally responsible and that we are not duplicating spending.

Good afternoon [REDACTED]

Thank you for contacting us.  
Your concerns have been forwarded to the appropriate parties and the matter is being dealt with.  
If they any questions, they will be in contact with you.  
Thank you again for taking the time and happy holidays.

Regards,

Subject: Pedestrian Crossing Lights - multiple concerns

Message:

Hi there, as a pedestrian in our city, I have three areas of concern to share with you.

- 1) The walk light at Idylwyld & Midtown Mall (the crosswalk behind the mall) has an absurdly long wait for crossing. There isn't no protection from the weather there and it is a highly used walk way. There's no reason for this wait time.
- 2) There needs to be a crossing LIGHT at the walkway at 3rd & Duchess. Children cross here all summer & cars come flying down that stretch. It is UNSAFE.
- 3) I have the same concern regarding the stretch of 8th St. from Broadway to Clarence to Cumberland. It is basically inaccessible as a pedestrian.

Thank you,

Hi, my name is [REDACTED]. I'm calling regards to the traffic issues in the Central Industrial Area. I tried to email but as often happens when I go on the city's website I was not successful. Something goes wrong. It's not very user friendly but we live in a condo close to 2nd Ave and we regularly hear trucks and Harley Davidsons roaring down 2nd Ave with either. No mufflers are very loud ones and we can clearly hear them with our windows closed over a block away. They are obviously way louder than the by law allows and I wonder why the city does nothing or almost nothing to enforce this period. Uh there are many studies that confirm this noise to be a health threat to people living in these corridors. Also leaf blowers that are gas powered. Many cities are now banning them. I think we should look at that within so many meters of a residential property. They are not only offensive in their noise, they are also dangerous to the health of the operators. My name is [REDACTED]. Thank you for listening, period.

Good morning Nathalie,

We are passing along this concern we received. I don't believe a response is required for this one.

**Regards,**

Good afternoon

Please find the following feedback on Facebook about a crosswalk at 485-1<sup>st</sup> Ave N. We let the resident know we have shared this with your team for review.

Hi, i have a suggestion for a safer cross walk across from a youth center, the cross walk at egadz Youth center is very sketchy and its very often a worker or youth will have a close encounter of getting hit because the cross walk signs are nearly invisible at night, i was thinking if you guys could put up one of those light up cross walks they have around schools because its mainly kids around the ages of 12+ going across the road.

Thank you

Hey Chelsea, it's [REDACTED] calling. I have [REDACTED] in the corner of Duchess than third, and I watched your video. Thank you very much, is very good. Excuse me. OK sorry. Coffee and throat today and I thought I'd like to add my two cents but wanted to talk to you first about how I do that to make it most effective. I have some concerns in the corner 'cause for pedestrian safety, for sure it's a busy traffic area because there's lots of science students that walk down that street had siast, so it's a gathering point and they usually going through at the busy times a day end of the day and started the day. Also people, cars making or vehicles making left hand right hand turns coming off of thirty Third Street in going towards downtown. They come around the corner. They drift right into the next lane. They don't is not protected like they do. The one in Sutherland where you're coming out of Southern new turning an east. I guess it is to go down college. There should be something more there to protect it so people stay in the right lanes 'cause it gets very confusing, especially for trying to make a left hand turn off the Duchess. I know I do 'cause I lived there but there's lots of cars there had do it, in fact it busy times a day I go another different route 'cause it's just not. It's not safe anyways, if you'd like to call me back, I could certainly give you some more input on that. Sorry for the long message, but I wanted to get a point across to take care. Have a good day treasure life.
