<u> </u>		Т	1
	Accessibility Rating Score		
	4 - A score of 4 indicates the highest degree of accessibility.		
	These play-units and areas are specifically designed to cater		
	to a wide audience and they incorporate features that are		
	easily accessible by multiple users. Base material is typically		
	comprised of rubberized tile or continuous rubberized safety		
	surface.		
	3 - A score of 3 indicates a moderate-high degree of		
	accessibility. These play-units and areas cater to a wide		
	audience and incorporate features that are easily accessible		
	by most users. Base material is usually comprised of		
	natural/rubberized woodchip or other comparable surface.		
	2 - A score of 2 indicates a moderate degree of accessibility.		
	These types of play units incorporate some features that are		
	accessible by design however lack elements that make them		
	accessible to a larger audience. Example, a play unit which		
	incorporates transfer platforms yet the base material is		
	constructued of sand, which limits access to the unit.		
	 A score of 1 indicates a low degree of accessibility. 		
	These units cater to a small audience and typcially have		
	many barriers limiting overall accessibility to the play unit.		1
	Units usually lack ramps, transfer platforms, base material is		
	constructed of sand or pea gravel material.
