

Climate Budget – Information Included in the Financial Budget

Measures with Quantified Emissions Reduction

- Summary of measures where it has been possible to estimate a quantified emission reduction
- Table includes Sector, Measure, Responsibility and Emissions reductions (t CO₂e), Cost of measure (\$).
- Summary includes total effect of measures in the climate budget; total cost of measures; and historical emissions reduction and emissions reduction in the projection.
- Description of measures

Measures with Non-Quantified Emissions Reduction

- Measures that are assumed to have an emission-reducing effect, but where level of uncertainty is too high to quantify the effect.
- Uncertainty may be linked to scope of the effect, or timing of the expected effect.
- Table includes sector, measure, responsibility and cost (\$)
- Description of measures

Activities that Lay the Foundation for Future Emissions Reduction

- Activities that reinforce climate work for the City of Saskatoon and that may lay the foundations for further emissions reductions after that budget cycle,
- Activities are included to make visible the scope of work being utilized to promote emissions reduction in Saskatoon.
- Table includes Sector, Measure, responsibility and cost (\$)
- Description of measures
