

Clarence Avenue and Main Street Intersection Improvements

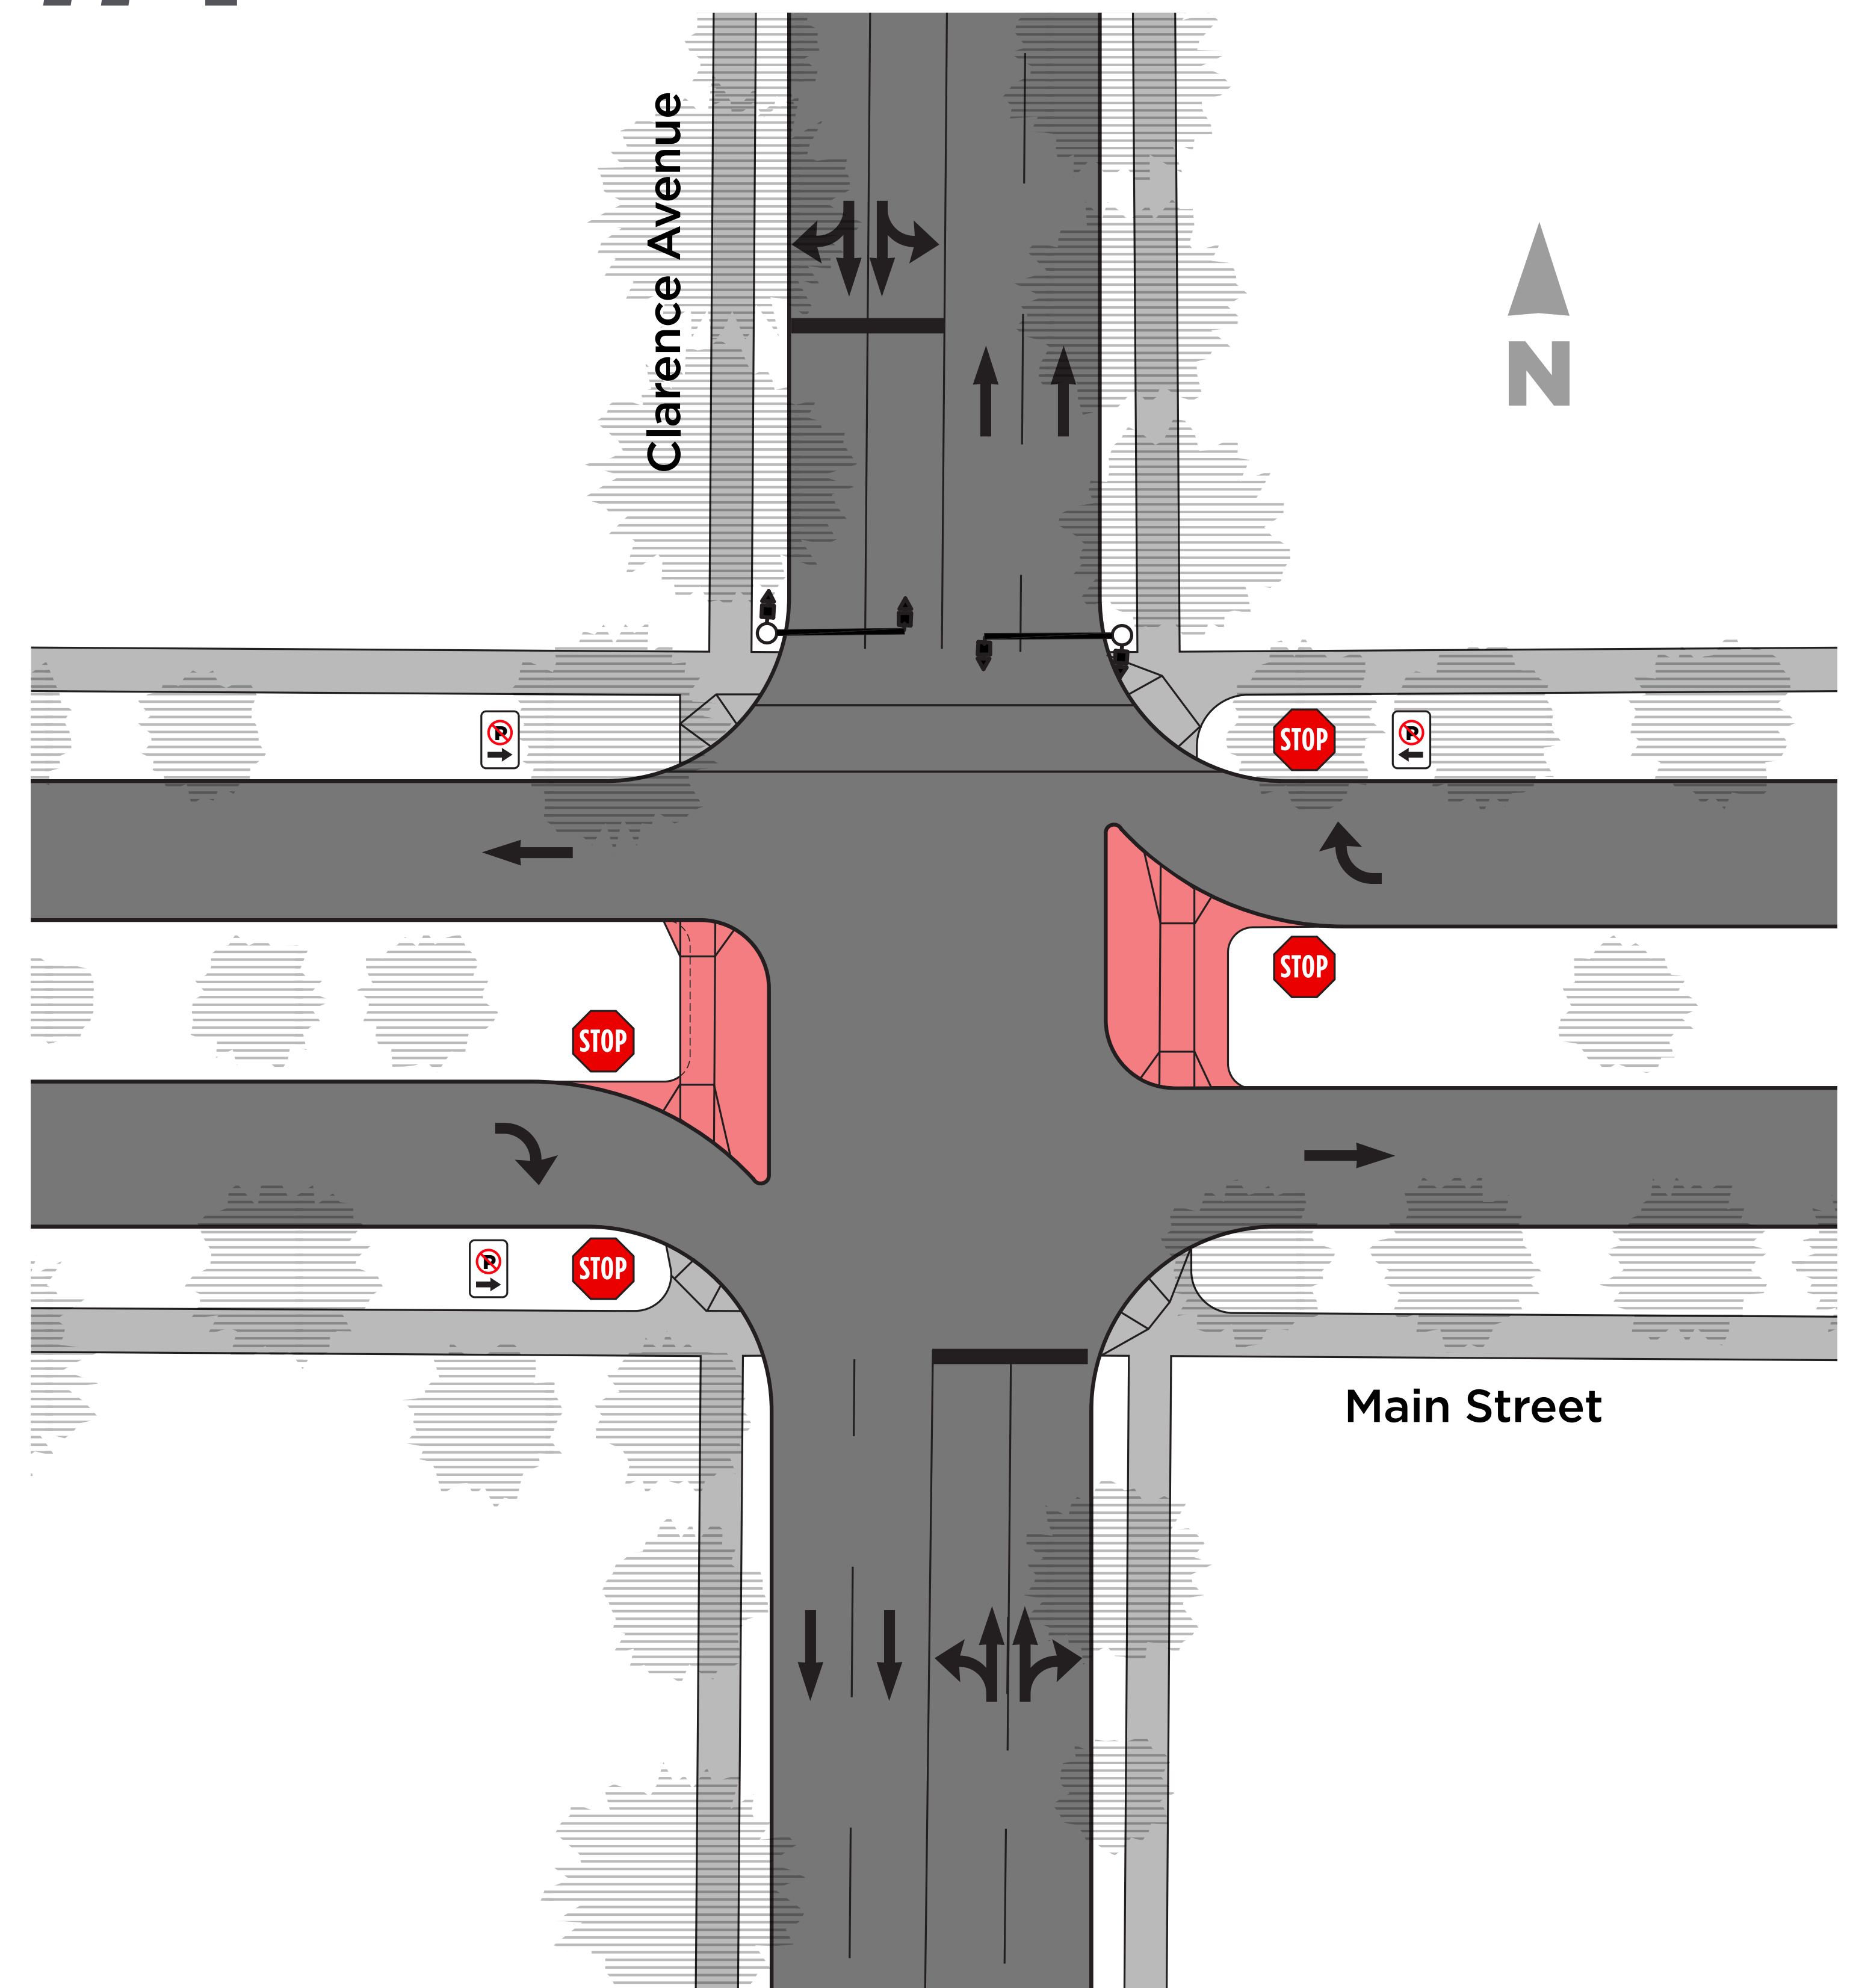

Background

- In 2015, this intersection was reviewed and discussed with residents during the Nutana and Varsity View Neighborhood Traffic Reviews.
- Following safety concerns heard from several residents in 2022, the intersection was reviewed again by City Administration.
- Right-angle (T-bone) collisions and short-cutting continue to present safety concerns at this location.

Engagement Event #1

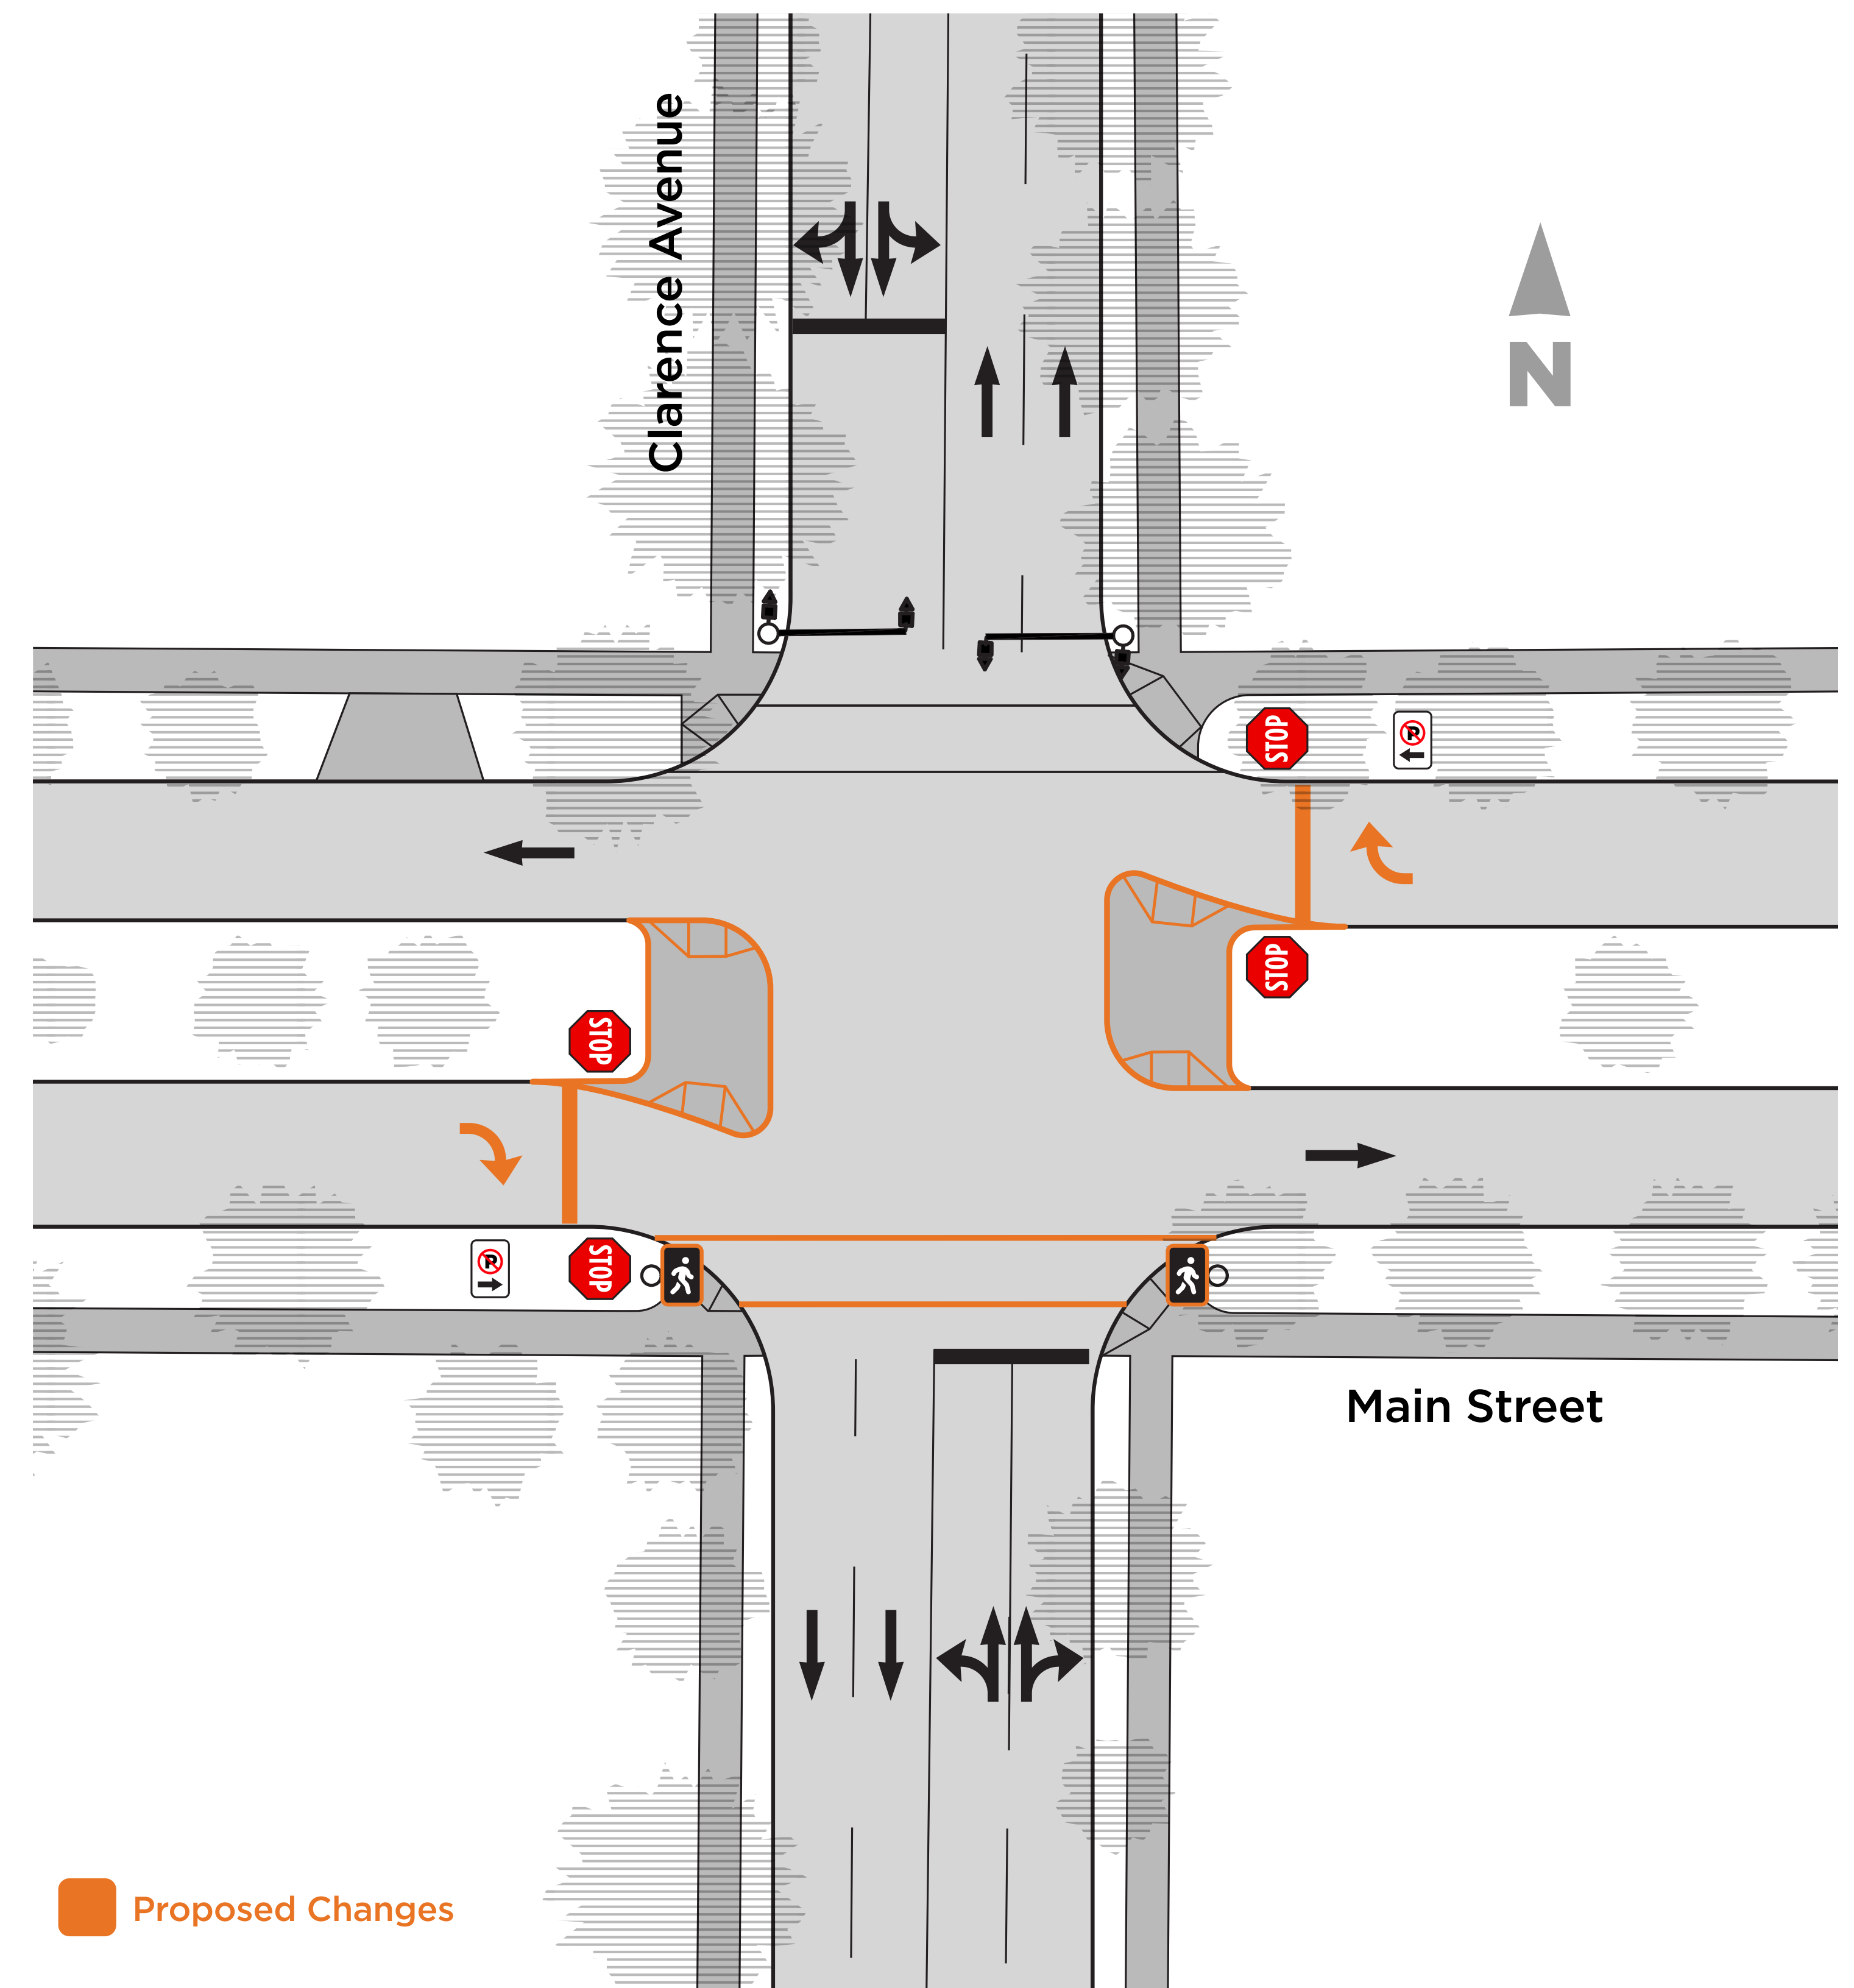

- › To improve safety and address collision patterns, channelization on Main Street is recommended.
- › This involves modifying the existing medians on Main Street at both approaches to create right turn only lanes.
- › This recommendation was presented to residents most impacted by the proposed changes in August 2022.

Recommendation

Based on the feedback received:

- A pedestrian crossing is proposed on the south side of Clarence Avenue.
- It is recommended cycling be considered in the channelization design.

Why are we here?

Now that we have collected feedback from residents most impacted by the recommended channelization, we want to hear from community members in Nutana and Varsity View.

Next steps

Winter 2023

- › City Administration will collect and compile your feedback.

Spring 2023

- › City Administration will present the review and recommendation, along with a summary of all feedback received, to City Council for approval.
