Attention: Hon. Mayor Charlie Clark, Chairman

Dear Sir:

Re: Life Safety Traffic Issues

I'm totally in agreement with the current proposal to reduce speed limits in residential and business areas to 40 km/hr and 30 km/hr in areas such as next to swimming pools, etc. where children can congregate.

One other major **life safety item** is the location of vehicles parked near intersections. From several of my random counts, 90% of vehicles on the street are either SUVs or trucks. Such vehicles are allowed to park near intersections (both street & lane) obstructing the view of on coming vehicles as these vehicles are much higher than a standard car. I have witnessed some major near T-bone accidents at intersections and I personally have had some close calls.

I respectfully request that a bylaw be issued specifying the minimum distance of 15 m (49.2 ft.) than any vehicle that is more than 1524mm (60") in height can park from any intersection (street or lane).

Regards,

W. D. Hall
