

## **Planned Projects in Support of the Low Emissions Community Plan – Not Included in this Report**

Some of the actions identified in the Low Emissions Community (LEC) Plan are in preliminary phases, have received funding, or have funding requests through other strategies. They are:

- Energy Performance Contract for retrofitting civic buildings with energy improvements;
- Bus Rapid Transit System;
- Active Transportation Network;
- Corporate Fleet Emissions Reduction Strategy;
- Transit Fleet Replacement;
- Implementation of a City-Wide mandatory Organics Program;
- ICI and Waste Strategy Implementation (2020 only);
- Leading by Example – City operated facilities mandatory ICI compliance (2020 only);
- Water Conservation Plan;
- Landfill Gas Expansion;
- Combined heat and power project at St. Paul's Hospital; and
- LED streetlights Implementation.

For a description of the full milestone targets refer to the LEC Plan. To achieve the full amount of emission reduction identified in the LEC action, further phases are likely to be required. Further, as the majority of the 2020-2021 actions outlined below are in the planning stage over this period, significant emissions reductions would not be achieved until implementation commences.
